

Pro Ventricleaner kit complete w 40 and 5 micron filters

Art nr 1.021 .010

Cleaning equipment for square and round ducts. This system works only with air . The nozzle is designed so that it pulls itself into the channel and through the holes relative to each other creates an eccentric force which means that by turning the hose nozzle can control where you want, for example, into the branches of the channel, to get it to go from corner to corner of square channels, etc..

This is a good method to clean loose contaminants, but if pollution is stubborn, it is advisable to combine it with the brush technique.

Facts

2 m³ / min (that is max what goes through the hose)

Day 10 bar
